OBJECTIVE

My current objective is to complete this year of high school maintaining a 4.0 GPA while I am still completing computer science projects

SKILLS

- Cash Handling
- Shift Management
- Sales
- Customer Service
- Inventory
- Coding
- Webpage Design
- Game Design
- Food Service
- Yearbook Design
- CSS
- JavaScript
- HTML
- Python
- SQL
- PHP
- Node.js
- C++

JOB EXPERIENCE

ASSISTANT MANAGER • LITTLE CAESARS
OCT 2, 2018 – OCT 3, 2019
Though it is unimportant to my main goal of working a career in computer science, I have thoroughly worked to achieve skills in basic team management and group coordination in my time as an employee of Little Caesars. Often in my time as an assistant manager I was forced to do many duties that would normally be the store manager's job due to the general incompetence of the actual store manager.

CASHIER • RITE AID PHARMACY
OCT 12, 2019 – PRESENT
At Rite Aid my job was usually relatively simple as my previous job was. I took care of the cash register, managed store inventory, and performed customer service tasks among many other responsibilities. In my time at the store so far, I have taken more than one-hundred computer-based training scenarios covering a variety of topics including money services such as Western Union, theft, fraud, tobacco sales, and various other trainings. I only work part time there at the moment and am looking to be granted a promotion.

EDUCATION

HIGH SCHOOL • 9-10 •
NORTHWEST PENNSYLVANIA COLLEGIATE ACADEMY
NPCA was a great school, and a name many colleges would recognize. I made it my home for my first two years of high school

however after some not-so-great teachers who didn't care much for me began to give me trouble and my grades suffered because of it, I left to find another school.

HIGH SCHOOL • 11-12 • ERIE HIGH SCHOOL

After leaving Collegiate I came to Erie High. My Junior year started off fantastically and I came to realize that classes didn't need to be extremely difficult to be rewarding. I joined a CS Principles class with Jordan Lander, the teacher of that class, and when he realized I was way ahead of the rest of the group, he pushed me to go farther and we began many projects, the most notable being Project Vibe. However, I spent less time in class and my grades suffered. This year I have been more goal oriented and have managed to attain almost perfect grades so far while managing the yearbook staff and running several projects.

COLLEGE • CLEVELAND STATE UNIVERSITY

At this point I have been accepted to Cleveland State University and have enrolled in the school as a computer science student.

VOLUNTEER EXPERIENCE AND LEADERSHIP

While attending Erie High school I managed a team of four people to create and design a JavaScript web-based app to achieve a goal. The result was projectvibe.org which while currently not a funded program, once held a vision to be a step in the right direction for mental health. The the app was fully built and functional, but it never came to fruition.

During my senior year at Erie High School I was the editor in chief of the yearbook class. In this role we created the first yearbook in

the school's existence that has been fully created by the students. We completed all deadlines quite a bit ahead of schedule and then I set off to the task of putting together complex committees for next year's yearbook staff for which time period I will be sitting on as an outside advisor.

As stated before, I worked at Little Caesars as an Assistant Manager and in my time there I had become proficient at team management and general team coordination.
